

Lévy 2019

Conference and Summer School on Lévy Processes

The 9th International Conference on Lévy Processes will be held on the island of Samos, Greece, 15-19 July 2019. This is a continuation of conferences previously held in [Angers \(2016\)](#), Wrocław (2013), Dresden (2010), Copenhagen (2007), Manchester (2005), Paris (2003) and Aarhus (2002, 1999).

The aim of the conference is to bring together a wide range of researchers, practitioners and graduate students whose work is related to Lévy processes and their applications.

The satellite Summer School will take place in Athens from 8 to 12 July.

Samos is the birthplace (c. 570 BCE) and work, during the first part of his life, of [Pythagoras](#). Besides being a [popular destination](#) in Greece, with ample natural beauty and beautiful beaches, Samos contains the one-km long 2600-year old Eupalinian aqueduct, a tunnel through the mountain, one of the greatest engineering [achievements of ancient times](#) designed by geometrical methods. The island of Samos nowadays hosts the Department of Statistics and Actuarial-Financial Mathematics and the Department of Mathematics of the University of the Aegean. This University is spread across 6 different islands, an idea that was initially conceived by [Constantin Carathéodory](#).

We look forward to seeing you there.

Organizers:

[Stavros Vakeroudis](#) (Dept. Stat.& Act.-Fin. Math., Univ. Aegean, Greece)

[Takis Konstantopoulos](#) (Dept. Math., Uppsala Univ., Sweden)
